THE CANADIAN INTERNATIONAL TRADE CLASSIFICATION

COMMODITY INDEX

The index to the Canadian International Trade Classification (CITC) has been developed jointly by the Department of National Revenue, Customs & Excise, and Statistics Canada, External Trade Division, to facilitate the introduction of electronic data processing (EDP) systems into DNR customs import clearance procedures. Codes listed herein will be used for reporting commodity imports on B-3 Customs Import Entries.

**INTRODUCTION
OF EDP** As a part of the EDP system, a new Customs Import Entry Form B-3, involving precoded information, will come into use as of April 1, 1972. Following from this the EDP system itself is scheduled to be introduced progressively at the Customs ports starting in 1973, with Canada-wide operation planned for 1975.

BENEFITS There are a number of benefits in the new Automated System compared with the present manual operation. Importers and their agents will find, once the system is operating nationally, an improvement in the uniformity of tariff application and in the control and release of goods. Carriers should find that the system will permit a speed-up in the movement of goods. Customs will benefit from improved administrative procedures and Statistics Canada will be able to produce more timely statistics in greater detail.

In order to realise these benefits, it is necessary that as much as possible of the data presented to Customs be in a form suitable for computer processing. This has required the development of new number codes, including the seven-digit commodity code to be reported on the B-3 import entry for every particular variety of merchandise entered.

**THE PRESENT
IMPORT
COMMODITY
CLASSIFICATION** The basis of the present commodity identification process is the Canadian Import Commodity Classification (MCC), introduced in 1964, based on the Statistics Canada Standard Commodity Classification. The basis of both these classifications is the stage of processing of the goods in question, whether they are raw materials, processed materials or finished goods.

The Import Commodity Classification, (MCC) comprises the following sections.

- I. Live Animals
- II. Food, Feed, Beverages and Tobacco, contains all commodities whose chief end use is as food, feed, beverages and tobacco. Within this section the commodities are further classified by component material and stage of processing.
- III. Crude Materials, Inedible, contains all commodities whose chief use is as materials for industry, and which have not been processed beyond the stage of cleaning, sorting or concentrating, together with the synthetic equivalents of some natural materials. The commodities are further classified by component material.
- IV. Fabricated Materials, Inedible, contains all commodities which have passed the preliminary stages of processing, but are still used chiefly as materials in some later industrial process. Within this section the commodities are further classified chiefly by component material.
- V. End Products, Inedible, contains all commodities which will not lose their identity through further processing, and which are commonly regarded as articles rather than materials, together with the finished identifiable parts, attachments and accessories of these articles. Within this section the commodities are further classified chiefly by principal use or function.
- VI. Special Transactions, Trade, contains certain essentially commercial transactions which are not, for various reasons, classified by commodity in trade statistics.
- VII. Special Transactions Non-Trade, contains certain transactions which do not have an international financial implication or which, for various reasons, are better considered separately from merchandise trade in economic analysis.

These seven sections are sub-divided into divisions, groups, and individual commodity classes, of which there are some 2700. More than two-thirds are in Sections IV and V. These 2700 five-digit classes form the basis of Statistics Canada monthly, quarterly and annual commodity trade reports.

THE NEW
CANADIAN
INTERNATIONAL
TRADE
CLASSIFICATION

These classes also form the basis of the new seven-digit commodity code, because the seven-digit Canadian International Trade Classification (CITC) is essentially the five digits of the present classification expanded by two digits to provide greater refinement of identity and to facilitate the clearance of goods through customs.

The sources of this additional detail are varied. Many of the 2700 five-digit classes were sub-divided following discussions with trade and industry associations and other government departments. Customs and Statistics Canada drew extensively on observations of the patterns of trade and the kinds of goods involved. In some areas, such as chemicals, a large number of trade names and proprietary descriptions are included, since the goods move in trade according to these rather than to generic descriptions.

COMMODITY
INDEX

The commodities have been arranged in alphabetical order, to assist the importer to seek out the description for the goods he is importing and to report the appropriate seven-digit commodity code on the import entry B-3. To simplify the task of putting the right seven-digit commodity code on the entry, the following guidelines should be observed.

KEYWORD

The commodity descriptions are arranged with the most important word in the description appearing first. This is known as the 'keyword' principle, followed in many product directories. Thus a typical description would read 'Pigments, blue, inorganic' rather than 'inorganic blue pigments'. If, however, more than one order of words has been deemed reasonable then, for example, both 'adhesive tape textile' and 'tape, adhesive, textile' will be found in the appropriate place in the alpha listing, with, of course, the same commodity code. Some of the listings are of a 'look-see' or indicative nature. Examples are:

Kerchiefs see headsquares
Boiler see specific type
Bronze is a copper alloy.

DESCRIPTIONS
WITH
NUMERICS

In addition to the alphabetical items in the listing, there are some which start with a number. Examples:

2, 4-D Ester dusts
1,1,1-Trichloroethane

All these will be found together at the end of the alphabetical listing.

ABBREVIATIONS

In order to accommodate the listings within the allotted space it was necessary to use abbreviations. A complete listing of all abbreviations used is included in page LXXIX.

NES One abbreviation commonly employed throughout this book is NES or N.E.S. which signifies 'not elsewhere specified'. The meaning of this phrase is the same as the Customs 'not otherwise provided for' (NOP).

Use is also made of the symbols (<) less than, (>) greater than.

LEADING The commodity code, which is always shown as seven digits in
ZEROS the listing of commodities, should be inserted in that fashion in the appropriate box on Form B-3. Leading zeros, if shown in the Index, should be put into the box also. The commodity code is shown in the Index as a number in groups of 3, 2 and 2, for the sake of readability only. The code should be put in the appropriate box on form B-3 as seven continuous numbers. Thus 703 25 21 would appear on the entry as 7032521. 006 40 10 would appear as 0064010.

PACKAGING Special procedures should be followed in applying the seven-digit commodity code to import packaging. There are three different categories of packaging in use, and the procedure to be followed will depend on the nature of the packaging. They are:

- (i) Import packaging which is reusable and adequately described on the invoice. Examples are paper cores, metal gas cylinders and glass bottles for alcoholic beverages. All such packaging is included in the alphabetical listing of the commodity codes, and the appropriate seven-digit code to be used will be shown. In all cases the first three digits for reusable and identifiable packaging will be 950.
- (ii) Import packaging which is reusable but insufficiently well described to permit detailed commodity code definition. In this instance the commodity code to be used is 9701010.
- (iii) Import packaging which is not reusable. There are some packing charges which are included in the costs of the goods, but shown separately on the Form B-3. For these, select the appropriate commodity code for the goods in question, and inscribe on the B-3 the first five digits only of the commodity code selected, with the final two digits in all cases of this kind to be 01.

NUMERIC On page XXIII of this book will be found a listing, in numeric
CITC ORDER order of the present 2700 five-digit classification, which is
LISTING included to provide an insight into the structure and content of the classification, and of its derivative the seven-digit Commodity Index, and to take care of a situation which may arise when the Importer is unable to find in the alphabetical listing a suitable

THE USE OF 99 commodity description for the goods being imported. When this occurs, the importer should turn to the five-digit class listing on page XXIII and select the appropriate five-digit number, which he should inscribe on Form B-3, with the two-digit suffix 99. This procedure should only be used as a last resort, and a special investigation will be conducted by DNR Customs and Statistics Canada of all entries which report codes ending in 99. To help importers who have to use the abbreviated class listing there is also a brief index to it at the first three digit (group) level, which will be found starting on page XV. Some time may be needed to become fully familiar with the new statistical codes pertaining to imported goods. This is the reason for permitting the initial use of the less precise five-digit code with the 99 annotation.

SOURCES OF HELP (a) Commodities - Where importers are unable to locate a commodity description and numeric code which will properly describe their goods, please write - Chief, Commodity Intelligence Section, External Trade Division, Statistics Canada, Ottawa K1A 0V5 - or Telephone (613) 992-1730 - or Telex 013-3585 Stat Can Ott.

(b) Tariffs - Please contact your local Customs Office.

GOODS RETURNING AFTER EXPORT All goods such as contractors' equipment and tools, survey equipment, construction and logging machinery, which are returned to Canada within five years of export, and entered under tariff items 7090501 and 7091001, should be assigned commodity code 9703010.

THE UNITS OF MEASURE The Commodity Index also shows a unit of measure, or quantity, in many cases. The unit of measure (pounds, bushels, cubic feet etc.) is followed by a two-digit code, which is to be entered in the unit of measure box on the Form B-3. The units of measure are those required by DNR Customs for the purpose of levying a specific rate of duty, together with those required by Statistics Canada and Customs jointly. A list of all units of measure used, together with the appropriate code is to be found on page XI.

THE TARIFF ITEMS Certain tariff items are shown against the commodity descriptions and codes. These comprise observations of the tariff items under which the goods in question have been entered fairly often, and have no legal standing. The authority for determining the tariff item under which any commodity should be entered remains solely with the Department of National Revenue, Customs and Excise, through the Canadian Customs Tariff and rulings obtained from that Department.

CONFIDENTIAL-
ITY
SAFEGUARDS

The data collected and processed on Form B-3 for Customs and Statistical purposes is required under the authority of the Customs Act. It will be apparent that more information is required under the new EDP system than under the present manual system. Provisions of both the Customs Act and the Statistics Act will assure respondents that the confidentiality of the importer's business will continue to be fully protected under the new system.

UNITS OF MEASURE USED IN COMMODITY INDEX

UNIT MEAS.	UNIT MEAS. CODE	EXPLANATION
BBL	43	VOLUME IN BARRELS FOR PETROLEUM, 35 CANADIAN GALLONS OR 42 U.S. GALLONS
BOX	62	NUMBER OF BOXES
BU	44	VOLUME IN BUSHELS BARLEY 48 LB. OATS 34 LB. BUCKWHEAT 48 LB. RYE 56 LB. INDIAN CORN /MAIZE/ 56 LB. WHEAT 60 LB.
C	16	NUMBER IN HUNDREDS
CARAT	56	WEIGHT IN CARATS
CORD	64	VOLUME IN CORDS
CU FT	41	VOLUME IN CUBIC FEET
CWT	57	WEIGHT IN HUNDREDWEIGHTS OF 100 LB. EACH
CWTAD	59	FOR WOOD PULPS AND SIMILAR PULPS, AIR DRY WEIGHT IN CWT OF 100 LB. EACH
CWT N	58	FOR CANNED FOODS, WEIGHT OF CONTENTS OF CANS IN CWT OF 100 LB. EACH, THE WEIGHT OF ALL CONTAINERS AND PACKING BEING EXCLUDED
DOZ	13	NUMBER OF DOZENS
DZ BT	15	FOR FERMENTED ALCOHOLIC BEVERAGES, NUMBER OF BOTTLES IN DOZENS
DZ PR	12	NUMBER OF PAIR IN DOZENS
FT	21	LENGTH IN LINEAR FEET
GAL	45	VOLUME IN CANADIAN GALLONS /1 U.S. GAL. = 0.83 CAN. GAL./
GROSS	14	NUMBER IN GROSS
KG	55	WEIGHT IN KILOGRAMS /1 KG. = 2.2 LB./
LB	52	WEIGHT IN POUNDS FOR FRUITS AND VEGETABLES IN LIQUID PRESERVATIVES, NOT CANNED, SOLID POUNDS IS REQUIRED. THE WEIGHT OF CONTAINERS AND PRESERVATIVE BEING EXCLUDED

UNITS OF MEASURE USED IN COMMODITY INDEX

UNIT MEAS.	UNIT MEAS. CODE	EXPLANATION
LB N	53	FOR CANNED FOODS, WEIGHT OF CONTENTS OF CANS IN LBS, THE WEIGHT OF ALL CONTAINERS AND PACKING BEING EXCLUDED
M	17	NUMBER IN THOUSANDS
M B F	37	VOLUME IN THOUSAND BOARD FEET
M C F	47	VOLUME IN THOUSAND CUBIC FEET
M KWH	60	THOUSAND KILLOWATT HOURS
NO	10	NUMBER
OZ	50	WEIGHT IN OUNCES
PACK	61	NUMBER OF PACKS
PAIR	11	NUMBER OF PAIRS
P GAL	46	VOLUME OF ALCOHOLIC CONTENT IN TERMS OF CANADIAN GALLONS OF THE STRENGTH OF PROOF /1 U.S. P GAL = 0.74 CAN. P GAL/
PKG	63	NUMBER OF PACKAGES
SF 3/8	33	VOLUME IN SQUARE FEET OF 3/8 IN. THICKNESS, OTHER THICKNESSES TO BE CONVERTED TO THE EQUIVALENT OF 3/8 IN. THICKNESS /EG. 10,000 SQ FT OF 3/16 IN. PLYWOOD = 5,000 SQ FT OF 3/8 IN. EQUIVALENT/
SF 5/8	34	VOLUME IN SQUARE FEET OF 5/8 IN. THICKNESS, OTHER THICKNESSES TO BE CONVERTED TO THE EQUIVALENT OF 5/8 IN. THICKNESS /EG. 10,000 SQ FT OF 1/4 IN. PARTICLE BOARD = 4,000 SQ FT OF 5/8 IN. EQUIVALENT/
SQ FT	31	AREA IN SQUARE FEET /SURFACE AREA/
SQ IN	30	AREA IN SQUARE INCHES /SURFACE AREA/
SQ YD	36	AREA IN SQUARE YARDS /SURFACE AREA/
TON	54	WEIGHT IN SHORT TONS OF 2,000 LB. EACH. 1 LONG TON = 1.12 SHORT TONS OR 2,240 LB. 1 METRIC TON = 1.1 SHORT TONS OR 2,205 LB.
TR OZ	51	WEIGHT IN TROY OUNCES
